

Universus Respondet: Fermi's Paradox Answered – a Novel

The year is 2030.

JPL scientist Dr. Steve Johnson and his team have spent several years spearheading the Mars HabiPrep project, a robotic habitat construction mission. During the final stage, an aberrant asteroid impact threatens to shut down the entire project. Soon the scientists are caught up in a secretive mission, one which may finally answer Fermi's famous question, "where is everybody?"

Readers have stated they are "in nerd love with this book," and have noted the story gives a "satisfied feeling from just watching people do a complicated job well." It is a unique perspective on speculative fiction, and carries emotional weight without being too heavy.

Title: *Universus Respondet: Fermi's Paradox Answered – a Novel*

Author: Bacil Donovan Warren
